## Grand <br> Test

PAPER I
Q. 1. Multiple choice questions

1. In uniform motion a body moves with
a) Constant velocity
b) Constant speed
c) Constant impulse
d) None of these
2. The value of $G$ on Mars is
a) Different from that on earth
b) Same as that on earth
c) Greater than that on earth
d) Less than that on earth
3. The S.I. unit of centre of mass is
a) m
b) $\mathrm{kg} \mathrm{m}^{2}$
c) kg m
d) kg
4. The velocity of a particle performing S.H.M. at mean position is
a) Maximum
b) Gradually increases
c) Minimum
d) Gradually decreases
5. Which of the following is the example of plasticity
a) Dough
b) Gum
c) Clay
d) All of these
6. When mercury is in contact with glass, the angle of contact is
a) Acute
b) Obtuse
c) Zero
d) Infinite
7. The distance between successive nodes is
a) $\lambda$
b) $\frac{\lambda}{2}$
c) $\frac{\lambda}{4}$
d) $2 \lambda$
Q. 2. Answer the following questions (Any 6)
8. Define : Athermanous substance, diathermanous substance
9. An observer standing at the sea coast observes 54 waves reaching the coast per minute. If the wave length of the wave is 10 mts , find the velocity
10. Define : Range of molecular force, Surface film
11. A steel wire of length 20 cms and uniform cross section $1 \mathrm{~mm}^{2}$ is tied rigidly at both ends. If the temperature of the wire is altered from $40^{\circ} \mathrm{C}$ to $20^{\circ} \mathrm{C}$. Claculate the change in tension
(Given co-efficient of linear expansion of steel $\alpha=1.15 \times 10^{-5}{ }^{0} \mathrm{C}$, $Y_{\text {steel }}=$ $2 \times 10^{11} \mathrm{~N} / \mathrm{m}^{2}$ )
12. What do you mean by an ideal simple pendulum and Practical simple pendulum
13. The radius of gyration of a body about an axis at a distance of 6 cms from its centre of mass is 10 cms . Find its radius of gyration about an axis passing through its centre of mass
14. Define gravitational field, Intensity of gravitational field
15. An object of mass 0.4 kg is whirled in a horizontal circle of radius 2 mts . If it performs $60 \mathrm{rev} / \mathrm{min}$. calculate the centripetal force acting on it

## Q. 3. Answer the following questions (Any 3)

1. A particle executing S.H.M. has velocities $v_{1}$ and $v_{2}$ when at distances of $x_{1}$ and $x_{2}$ from the centre of the path. Show that the time period is given by

$$
T=2 \pi \sqrt{\frac{x_{2}^{2}-x_{1}^{2}}{v_{1}^{2}-v_{2}^{2}}}
$$

2. An organ pipe $P_{1}$ closed at one end vibrating in its first overtone and another pipe $P_{2}$ open at both ends ibrating in its third overtone are in resonance with a given tuning fork. What is the ratio of the length of $P_{1}$ to that of $P_{2}$
3. Explain Maxwell distribution
4. Find the moment of inertia of a ring about its diameter
Q. 4. Answer the following (Any 1)
5. (a) With a neat diagram derive the equation for periodic time of conical pendulum
(b) Find the acceleration due to gravity at a depth of 2000 km from the earth's surface; assuming that the earth has uniform density $(\mathrm{R}=6400 \mathrm{~km})$.

OR
2. (a) Explain the formation of stationary wave on string by analytical method [4]
(b) Calculate the temperature at which perfectly black body radiates energy at the rate $5.67 \times 10^{4} \mathrm{watt} / \mathrm{m}^{2} .\left(\sigma=5.67 \times 10^{-8} \mathrm{watt} / \mathrm{m}^{2} \mathrm{~K}^{4}\right)$

## PAPER II

Q. 5. Multiple choice questions

1. Oscillator is an electrical device which converts
a) D.C. to A.C.
b) A.C. to A.C.
c) A.C. to D.C.
d) D.C. to D.C.
2. The work that must be done to remove an electron from an atom is called its
a) Electron infinity
b) Ionization energy
c) Energy band
d) Binding energy
3. An electron behaves as a
a) Particle
b) Wave
c) None of these
d) Both a and b
4. Magnetic flux
a) Is always positive
b) Is always negative
c) Is a vector quantity
d) Can be positive or negative
5. Permeability of diamagnetic substances is
a) Zero
b) Less than zero
c) Less than one
d) More than one
6. Ampere second stands for the unit of
a) Power
b)Energy
c)E.m.f.
4) Charge
7. For steady interference, the two sources of light must be
a) Coherent
b)Monochromatic
c) Equally bright
d)All of these
Q. 6. Answer the following questions (Any 6)
8. Light reflected from the surface of a glass slab is completely plane polarized when the angle of incidence is $56^{0} 40$ Find the value of ${ }_{a} \mu_{g}$
9. Which are the various energy losses in a transformer ?
10. Write a short note on Thomson's atomic model (1904)
11. What is solar cell? Write its advantages
12. Find out the magnitude of resistance $X$ in the circuit shown below, when no current flows through $5 \Omega$ resistor

13. When a bar magnet is suspended at a place it makes 10 oscillations per minute. How many oscillations it will make per minute, when it is re-magnetized so that the pole strength is tripled?
14. If the amount of electric flux entering and leaving a closed surface are $\phi_{1}$ and $\phi_{2}$ respectively, what is the electrrci charge inside the surface?
15. Two sources of light of wavelengths $2500^{\circ} \mathrm{A}$ and $3500^{\circ} \mathrm{A}$ are used in Young's double slit experiment simultaneously. Find out at which order of the two wavelengths patterns the fringe coincide

## Q. 7. Answer the following questions (Any 3)

1. Write a short note on resolving power of a microscope
2. A Bakelite cube having each side of length 1 cm is kept in an electro static field of intensity $500 \mathrm{~V} / \mathrm{m}$. Calculate the energy contained in the Bakelite cube (dielectric constant of Bakelite is 5)

## 3. Explain in detail resonant frequency

4. Calculate the radius of the first Bohr orbit from the given data and hence find the radius of the third Bohr orbit

Data $m=9 \times 10^{-31} \mathrm{~kg}, e=1.6 \times 10^{-19} \mathrm{C}, \mathrm{h}=6.63 \times 10^{-34} \mathrm{Js}$

$$
\epsilon_{0}=8.85 \times 10^{-12} C^{2} / N^{2}
$$

Q. 8. Answer the following questions (Any 1)

1. a) Write a short note on space communications
b) Explain Inductive reactance $\left(X_{L}\right)$

Capacitive reactance $\left(X_{C}\right)$
OR
2. a) Write a short note on energy of Bohr's orbit
b) What is diffraction of light. Also explain Frensel's diffractions and Fraunhofer diffraction
